### **Joint winner: GiK Acoustics Room Kit 3**

Room treatment is perhaps not the sexiest component in the audio signal chain, but bass traps, absorbers, diffusers, and reflectors can revolutionise the sound of a system. However, choosing the right room treatment can seem daunting at first. GiK Acoustics has simplified the task: by seeing repeatedly what is most commonly used to help resolve the sound of audio, GiK assembled four off-the-peg kits that cover most of the problems encountered in virtually every room. The company's Room Kit 3 comprises four Toblerone-shaped 'Tri-Trap' corner bass traps, three 242 Acoustic panels for side-wall absorption, and one Monster trap, best used on the wall behind the listener's head. These are broadband traps that cover most basic room problems. You will be surprised at how fine your system will sound, no matter how humble or how exotic that system might be!
